LLOYD'S REGISTER OF BRITISH AND FOREIGN SHIPPING.

YACHT REGISTER.

LLOYD'S REGISTER OF BRITISH AND FOREIGN SHIPPING.

ESTABLISHED 1834.

YACHT REGISTER.

From 1st May, 1880, to 30th April, 1881.

OFFICE: 2, WHITE LION COURT, CORNHILL, LONDON.

THE YACHT REGISTER,—which is printed solely for the use of Subscribers,—contains, in addition to the Names, Class, and other useful information relating to Yachts classed by the Society, the Names, Dimensions, &c., of all Yachts, the particulars of which are known; also, in an Appendix, a List of the various Yacht Clubs and their respective Flags, an Index of Signal Letters, a List of Yachts which have had Names Changed, and an Alphabetical List of the Names and Addresses of Yacht Owners so far as they can be ascertained.

The Conditions regulating the classification of Yachts are contained in the Society's Rules.

A Key to the Register precedes the List of Yachts.

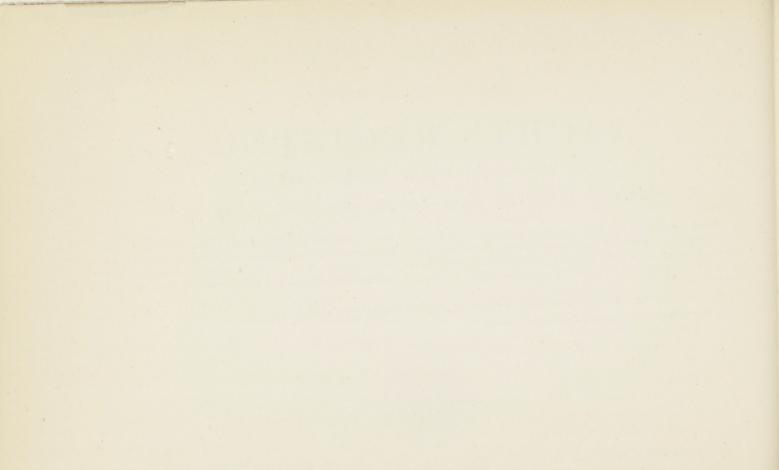

TABLE OF CONTENTS OF YACHT REGISTER,

AND THE RULES AND REGULATIONS.

LLOYD'S REGISTER OF BRITISH AND FOREIGN SHIPPING.

YACHT REGISTER.

RULES AND REGULATIONS.

SECTION 1. The Committee of Lloyd's Register of British and Foreign Shipping having, at the request of a deputation of Yacht Owners and others interested, determined to provide a Register for the faithful and accurate Classification of Yachts, the following Rules and Regulations, applicable to this description of vessel, have been adopted.

Section 2. The Yacht Register will be printed and issued on the 1st May annually, or in each alternate year as may be deemed expedient, and will contain the names, particulars, and characters of yachts classed by the Society, together with the names, &c., of all yachts the particulars of which are known.

Section 3. For the convenience of Subscribers, a Supplement, containing the additions to, and corrections made in, the Register Book, will be printed on the 1st May in those

years in which a new Register Book will not be issued, in order that the latest and most complete information may thus be furnished.

Section 4. The Superintendence of the affairs of Yacht Classification to be under the direction of the Committee of Management of Lloyd's Register of British and Foreign Shipping, and in accordance with the Bye-laws, Rules and Regulations of the Society.

Section 5. The Committee to be empowered to make such Bye-laws for their own government and proceedings as they may deem requisite, not being inconsistent with the original Rules and Regulations under which the Society was established; but no new Rule or Bye-law to be introduced, nor any Rule or Bye-law altered, without special notice being given for that purpose at the

Meeting of the Committee next preceding that at which such Motion is intended to be made; such notice to be inserted in the summons convening the meeting. No new Rule, or alteration in any existing Rule, materially affecting the Classification of Yachts, to take effect until the expiration of six months from the time it shall have been determined upon.

Section 6. The Characters assigned to yachts to be, as nearly as possible, a correct indication of their real and intrinsic qualities, and to be in all cases fixed (not by the Surveyors, but) by the Committee after due consideration of the reports of the Surveyors and such other documents as may be submitted to them.

SECTION 7. The Surveyors to the Society not to be permitted (without the especial sanction of the Committee) to receive any fee, gratuity, or reward whatsoever for their own use or benefit, for any service performed by them in their capacity of Surveyors to this Society on pain of immediate dismissal.

Section 8. The Surveyors will be directed to attend on Special Surveys of Yachts while building, or under damage or repair when required; the charge for which is to be regu-

lated according to the nature and extent of the service performed. In all cases, the application for the services of the Surveyors must be made in writing addressed to the Secretary.

Section 9. When the Surveyors consider repairs to be requisite, they are respectfully to communicate the same in writing to the Owner, Master, or Agent, and if such repairs be not entered upon within a reasonable time, a corresponding report is then to be made to the Committee for their decision thereon.

Section 10. Parties considering the repairs suggested by the Surveyor to be unnecessary or unreasonable, may appeal to the Committee, who will direct a Special Survey to be held, but should the opinion of the Surveyor be confirmed by the Committee, then the expense of such Special Survey is to be paid by the party appealing.

Section 11. All reports of Survey to be made in writing by the Surveyors, according to the forms prescribed, and submitted for the consideration of the General Committee, or of the Sub-Committees of Classification; but the character assigned by the latter to be subject to confirmation by the General Committee.

SECTION 12. The Reports of the Surveyors, and all documents and proceedings relating to the Classification of Yachts, to be carefully preserved; and parties proving themselves to be interested therein, to have access to the same under the direction of the Chairman or the Deputy-Chairman.

Section 13. Copies of the original Reports (if the yachts be already Classed, but not otherwise), so far as relates to the dimensions, scantlings, fastenings, and materials, in cases where the correctness of the reports in these particulars is certified by the builders, are granted, on application being made by Owners or others shown by them to be interested in the vessel.

Section 14. New Vessels, to entitle them to a class in the Register Book, should be built in accordance with the Society's Rules for Yachts, and under the Survey of the Society's Surveyors. In the case of vessels already built being offered for Classification, the Rules, hereafter described, must be complied with.

Section 15. Each person subscribing the sum of half-a-guinea per annum (or such other sum as the General Committee may fix) to be entitled *for his own use* to one copy of the "Yacht Register."

SECTION 16. The Subscription of Yacht Clubs to be

Two Guineas per annum, for which two copies of the work will be supplied.

SECTION 17. The Subscription of Marine Insurance Companies and other Public Bodies to be regulated by the Committee on special application in each case, but not to be less than Two Guineas per annum.

SECTION 18. The following Fees to be charged to Owners for surveying yachts during their construction, and for their Classification in the Yacht Register.

For each Ya	cht un	der	5 tons				£3
,,	of	5	tons and	under 10	tons	S	5
,,	,,	10	,,	20	27		7
,,	,,	20	,,	40	,,		10
,,	,,	40	,,	60	,,		12
,,	,,	60	,,	100	,,		15
,,	,,	100	, ,,	150	,,		17
,,	,,	150	tons and	above			20

Section 19. For Surveys for Damage or for other Surveys, held at the request of the Owners, and for the Surveys of yachts for re-classification under the Society's Rules, a charge will be made according to the nature and extent of the service performed.

All repairs which may be required on the Surveys above referred to, must be performed under the superintendence of the Society's Surveyors.

Mem.—It is to be understood that in all cases where travelling and other expenses are incurred by the Surveyors in connection with the above services, they are to be defrayed by the parties interested in the same.

SECTION 20. Certificates of Character signed by the Chairman, the Deputy-Chairman, or the Chairman of the Sub-Committee of Classification, and countersigned by the Secretary, will be granted on application; the charge for which will be as follows:—

EXPIRATION AND REMOVAL OF CHARACTER.

SECTION 21. The Continuance of any Class in the Register will depend upon its being shown, by periodical Survey (annual if practicable), that the efficiency of the vessel is duly maintained.

At the termination of the several periods assigned to yachts for retaining their Character A, the word "Expired" will be inserted against them; and if not Surveyed for a further period of Classification, prior to the reprinting of the Register, they will appear without any Character.

The eleventh, twelfth, and thirteenth columns of the Register left blank indicate that the vessel has never been Classed in the Register. Three dots (...) in column 12 indicate that the vessel was at one time Classed by this Society, but that the Class has been withdrawn at Owner's request. A black line with date under it in column 13 indicates that at that date the vessel from reported defects was not entitled to a Character in the Register. A red line with date under it in this column indicates that the Class was withdrawn from non-compliance, at that date, with the Society's Rules.

APPLICATION FOR CLASS.

Section 22. In vessels to be built under Survey for Classification a sketch of Midship Section showing the

details of the proposed scantlings and arrangements, and other plans where necessary, should be submitted by the builder, through the Local Surveyors, for the approval of the Committee. The Character A will not be granted to any vessel unless satisfactory evidence of the date of building, and place where built is produced.

EQUIPMENT. (Figure 1.)

To entitle yachts to the Figure 1, for Equipment, Section 40 of the Rules for Wood, or Section 34 of the Rules for Iron Yachts, should be complied with; and the anchors and cables supplied should be in accordance with Table 9 attached to the Rules. For steam yachts see also Section 35, of the Rules for Iron Yachts.

YACHTS BUILT OF WOOD.

RULES FOR CLASSIFICATION.

Section 23. Yachts built under Survey in accordance with the Rules and with Tables 1, 2, 3, and 4 will be classed A for a term of years to be regulated by the description of materials employed, the fastenings used in their construction, and other conditions, as hereafter described.

Yachts not intended to be built in accordance with the Rules and Tables, may, if built under Survey and found efficient, be considered eligible to be classed A without a term of years, provided a sketch of Midship Section with full particulars of scantlings and mode of construction be submitted in the first place to the Committee and receive approval.

Those yachts which are classed A for a term of years are throughout that period to be subjected to occasional or annual Surveys if practicable; and when half such period has elapsed, they must undergo the Special Survey, known as the "Half-time" Survey, particulars of which are given in Section 41. At the end of their period of Classification they will be eligible to obtain further periods

of Classification on the A Character, by submitting to the requirements of the Special Surveys for Continuation or Restoration, Sections 42 and 43.

Those yachts which are classed A without a period of years will be subjected to occasional or annual Surveys if practicable, and will be required to undergo a Special Survey every four years. The nature and extent of these surveys are stated in Section 45.

For yachts already built, which may be offered for Classification, see Section 46.

SURVEYS WHILE BUILDING.

SPECIAL SURVEY.

Section 24. The Surveyors are to examine during the progress of a vessel the materials and workmanship, from the laying of the keel to her completion, and to point out as early as possible anything that may be objectionable.

If upon completion of the vessel she be favourably reported to the Committee she will have the distinctive mark, thus \(\mathcal{H} \), assigned to her in the Register, showing

that she has been built under Special Survey. If the vessel be not favourably reported the distinctive mark will be withheld; and should the material or workmanship be in any degree objectionable she will in consequence be liable to a reduction of class.

ORDINARY SURVEY.

New vessels not building under Special Survey are to be surveyed by the Surveyors to this Society in the following four stages of their progress, or they will be liable to lose one year of the period to which they might otherwise be entitled.

- 1. When the frame is completed, timbers dubbed fair inside and outside ready to receive the planking and before any planking is wrought.
- 2. When the beams are put in, but before any decks are laid, and with a sufficient quantity of ceiling unwrought to admit of an examination of the inner surface of the outside planking.
- 3. When the hull is completed, and before the plank is painted or payed.
 - 4. After the vessel is launched and equipped.

Due notice must be given by the builder or owner when the vessel is ready for these surveys.

DIMENSIONS.

Section 25. The Dimensions are to be determined as follows:—

Length.—The length is to be the distance from the fore part of the main stem to the after part of the sternpost, on the range of the upper deck.

Breadth.—The breadth is to be the greatest external breadth of the vessel.

Depth.—The depth is to be the distance from the top of the upper deck beam amidships to the top of the floors.

Tonnage.—The tonnage is to be computed in the following manner:—From the length deduct the breadth, multiply this result by the breadth, and that product by the half breadth, and divide by ninety-four: this tonnage is to regulate the scantlings, arrangements, and the equipment.

Provided any part of the stem or sternpost or other part of the vessel, at or below the load water-line, project beyond the length taken as above, such projection or projections shall, for the purpose of finding the tonnage, be added to the length as above described, and in cases where from any peculiarity of design these rules for tonnage do not appear to meet the requirements of the vessel, a full statement of the circumstances is to be submitted to the Committee for their consideration.

The period to which a vessel will be entitled under Table 1 of the Rules, will be that of the lowest grade material used in her construction.

To obtain a higher class than this for wood materials, the vessels must be built under the following Rule:—

MIXED MATERIAL RULE.

Section 26. Yachts, below the fourteen (14) years' grade for timber materials, of superior workmanship, and in which high class materials, and extra fastenings have been judiciously employed to such an extent as to satisfy the Committee,—may be allowed a period of original classification exceeding that to which the material of the lowest class used would otherwise entitle them, such additional period not to exceed two years.

Builders seeking this advantage, must in the first instance, submit for the Commitee's approval, a drawing of the midship section, with full details of construction, and of the proposed materials and scantlings, through the Resident Surveyor, who is to state to the Committee his opinion thereon, and the vessel must be built under Special Survey.

No vessel already built, however, can have the advantage of the above Rule, except a Special Survey be held on her, to determine her claims thereto.

The highest (unless of a very limited quantity) and the lowest grade timber materials used in the construction of such vessels will be inserted in the Register.

VESSELS BUILT UNDER A ROOF.

Section 27. Yachts built under a substantial and efficient roof, kept in good repair, which shall project at each end beyond the length, and on each side beyond the breadth, a distance equal to half the breadth of the vessel, shall have one year added to the period prescribed, provided they shall have been Surveyed while building, and shall have occupied a period of not less than six months in their construction, and during three months of this period not more than one half of the outside planking has been wrought, so as to enable the frame throughout to be seasoned.

For extra period allowed for copper or yellow metal fastenings, see Section 36.

SUGGESTIONS FOR THE CONSTRUCTION AND CLASSIFICATION OF WOOD YACHTS.

Section 28. The whole of the timber is to be of good quality, properly seasoned, free from sap, and from all defects, and of the description shown in Table 1, as applicable to the several terms of years for which yachts may respectively be appointed to remain on the character A.

The frame to be well squared.

The scantlings and dimensions to be in accordance with Table 2.

The workmanship is to be well executed for all grades. Each set of frame timbers to be bolted together. The butts of the timbers to be close. Where the heads and heels are not full moulded, the timbers are to be well cross-chocked with a proper butt at each end of the chock; and where the heads and heels of timbers which come together are full moulded, they are to be properly secured to each other by dowels or otherwise.

Where cast-iron floors are fitted, the bolt and treenail holes

in the same are to be carefully rimed out, and the floors cast to their proper bevellings, so as to prevent the scoring of bottom planking or working furrens. Where deadwood, keels, &c., of lead are used, they must be connected to the wood deadwood, keel or keelson by scarphs (either horizontal or vertical) and dowels. The keelson bolts should have the points screwed, with nuts hove up in recesses in the lead keel.

Where loose lead or iron cast ballast is fitted between the timbers, each piece should be cast with lips at each end, so as to allow the weight to rest on the frame timber instead of the bottom planking.

Where lead in any considerable quantity is to be fitted on the outside, to prevent straining, the vessel at this part must be additionally strengthened and fastened to the entire satisfaction of the Surveyor.

KEEL, STEM, STERNPOST AND DEADWOOD.

SECTION 29. The size given for siding of keel in Table 2 to be the siding amidships at the lower edge of rabbet; the keel may taper downwards as well as towards the ends of the vessel. The siding given for the stem in Table 2 is the size required for the main stem at the fore edge of rabbet at

the height of the bowsprit. The siding given for the sternpost in Table 2 is the size required for the sternpost at the lower part of the counter; and the post may taper from this point downwards.

IRON FLOORS.

SECTION 30. When cast iron floors are fitted they should be cast with stops to let into the keel, and a dowel at the head to secure the heel of the second futtock. They must have holes in the throats for the keelson bolts, and in the arms to admit of their being frame-bolted to the first futtocks.

When the deadwood extends all fore and aft with the timbers abutting against them, wrought or cast-iron crutches or floors must be fitted at alternate frames; the arms to extend well up the frames, with at least three through bolts in each arm, the throat bolt to be a through keelson bolt.

SCANTLINGS.

SECTION 31. The scantlings of the frame timbers, keel, keelson, thickness of planking, &c., should not be less than those shown in Table 2.

The siding and moulding of the timbers are to be a fair taper from the floor head to the planksheer. Should the timber and space be increased, the siding of the timbers to be increased in proportion, except at the fore end of the vessel, where for one-fifth the length single frames will be admitted, and the single timber and space should not exceed three-fourths that given in Table 2 for double frames.

BEAMS, &c.

Section 32. The sizes of the deck beams are to be regulated by the length of the beams amidships as shown in Table 3. The beams should be of the size of the midship beam except at the after end of the vessel, where they may be reduced in proportion to their length; mast beams and beams to winch or windlass bitts and bowsprit bitts, if fitted with a running bowsprit, are to have the siding and moulding one-sixth larger than the sizes given in Table 3.

The beams to be either dovetailed or dowelled to the shelf.

Care should be taken to strengthen the deck in the vicinity of the mast holes by carlings, &c.; also the stern framing, in order to withstand the strains brought on it by the main sheet.

SHELVES AND WATERWAYS.

Section 33. The shelves and waterways are to have the beam ends either dowelled or dovetailed to them, and are to be properly shifted and scarphed.

PLANKING.

Section 34. The planking to be of good quality, of the description prescribed in Table 2; to be clear of sap and free from all defects.

The planking on the inside of the vessel to be properly shifted and fastened so that there shall be either treenails or through bolts, or short bolts in each plank in every timber.

No butts to be nearer than 5 feet to each other unless there be a strake wrought between them, and then a distance of 4 feet will be allowed; and no butts to be on the same timber unless there be three strakes between. A departure from this rule will be allowed at the ends of the vessel, but will not be sanctioned unless an accurate description of the shifting of the planking be transmitted by the Surveyors, to enable the Committee to form a proper judgment on the case.

FASTENINGS.

Section 35. Treenails to be of good quality, and of a description equal to the best material through which they pass. The treenails are to be circular, and engine turned, not grain cut or knotty, they should be free from sap, and in all cases they are to be efficiently caulked or wedged outside.

Where planks above eleven inches in width are used they must be double fastened; and those above eight inches in width must be fastened double and single; and if less than that width the planks may be fastened single.

Every butt in each outside plank to be fastened with two bolts, one of which is to be in the adjoining timber, and one through and clenched.

All the bolts of the knees, breasthooks, crutches, riders, transoms, pointers, keelsons, shelf pieces, waterways, heels of timbers against deadwood, and all other important fastenings, are to be driven through and clenched on rings of the same metal as the bolts. If the shelves and waterways are fastened with copper or yellow metal bolts, they are to be driven through the outside planking at every frame, with bolts of the sizes given in Table 4.

The deck binding bolts in all cases to be driven through the outside planking.

In yachts where the keel is of American Rock Elm or material of equally hard texture, and where the middle line bolts are of iron they may be allowed to be driven from one inch to one and a half inches short of the underside of the keel, with a wood plug tightly driven against their ends.

In knees or knee riders, vertically or diagonally fitted, the throat bolts in the side arms are to be placed as near as possible to (but not in) the angle of their throats; and the next bolt should not be at a greater distance than from eight to ten inches from the throat bolt, where practicable; also in the bolting of lodging or horizontal knees, the same arrangement should be maintained where the spacing of the timbers will admit of it. The up and down bolts in the knees to beams are not required to go through the deck, but are to be clenched on rings of the same metal as the bolts.

The shelves, bilge planks, and limber strakes, where fitted, to be through bolted at least in alternate timbers.

When the heels of the first futtocks meet at the middle

line on the keel under the keelson, the through bolting of the limber strakes may be dispensed with.

EXTRA PERIOD ALLOWED FOR METAL FASTENINGS.

Section 36. Paragraph 1. An additional year will be allowed to vessels if fastened externally with treenails, and with copper or yellow metal bolts, to the exclusion of iron, in the outside planking, keel, keelson, deadwood, stem and sternpost; also in the hanging knees and riders, hooks and crutches (the bolts of which must pass through the outside planking), from the lower part of keel up to the height of one-fifth the midship depth of hold, set down below the upper side of the deck at side, and parallel thereto forward and aft, above which all external bolt fastenings, and the fastenings of the deck may be of iron, if properly galvanized. The bolts in the heels of timbers abutting against the deadwood, must be of copper or yellow metal, driven through and clenched.

In all cases through bolts must be clenched on rings of the same metal.

Paragraph 2. Two additional years will be allowed if, in

addition to the foregoing, the whole of the external bolt fastenings be of copper or yellow metal to the entire exclusion of iron, from keel to planksheer inclusive: and the frame, chain and preventer bolts, and all inside fastenings be of iron properly galvanized.

Paragraph 3. Three additional years will be allowed if, in addition to the requirements of paragraph 2, the whole of the external fastenings be of copper or yellow metal bolts and dumps in lieu of treenails, above the floor heads. The number of fastenings to be the same as if treenails were used, and the proportion of through bolts to be at least two-thirds of the whole of the fastenings.

VESSELS OF EXTREME PROPORTIONS.

Section 37. Yachts, the length of which exceeds five times their extreme breadth, or eight times their depth, should have additional longitudinal strength in proportion to their size, by increasing the shelves and clamps, the thickness of topside planking and wales, and the internal thick-strakes; or by fitting iron diagonal plates on the outside of the frames; or by such other means as may in each case be approved by the Committee.

IRON FASTENED YACHTS.

Section 38. All yachts, although iron fastened (except as hereinafter mentioned), shall be eligible to be classed in the same manner as copper or yellow metal fastened yachts, so long as they remain unsheathed with copper or yellow metal, provided they are in all other respects constructed in accordance with the Rules; but when sheathed with copper or yellow metal over the iron fastenings, the words "Copper or Yellow Metal over Iron Bolts," shall be added to the Character in the Register Book, and continued until the yacht be thoroughly copper or yellow metal fastened.

AIR COURSES.

SECTION 39. Air courses must be left all fore and aft below the clamps, and proper air openings provided in the hold.

EQUIPMENT.

Section 40. All vessels are required to have their masts, spars, and rigging, the rudder, pumps, windlass, winch or capstan, scuppers, and hawse pipes, in good order, and sails in sufficient number and in good condition. Windlasses, if

of wood, to have the iron spindle, in all cases to be in one length, passing through the body of the windlass.

The anchors, cables, &c., are to be of approved quality, properly tested at a licensed public machine, in number and length as set forth in Table 9.

The efficient state and condition of the whole of the yacht's equipment will be designated by the figure 1 following the character assigned.

A Certificate of all chains and anchors * having been tested, showing the strain applied to them, must be produced before the yacht is classed with the figure 1.

The length and condition of the chain cables are to be ascertained by removal from the lockers on every special Survey for Classification.

Steam yachts are to be subject to the same periodical Surveys as sailing vessels, and whenever the boilers are taken out, the vessel is to be submitted to a particular and special Survey, in order to ascertain her general condition.

HALF-TIME SURVEY.

SECTION 41. The vessel to be placed in dry dock, or on ways, so that the keel and bottom may be examined (unless she has been thus Surveyed by the Society's Officers within the previous 12 months) the hold to be cleared, and proper stages made both inside and outside; the limbers and all air courses cleared, and if the vessel has not already got the air courses described in Section 39 of the Rules, they are now to be made for one-fifth the length of the vessel from each end; the outside planking to be scraped bright where considered necessary from any apparent defect; from 6 to 12 treenails on each side to be driven out at various parts, according to the size of the yacht.

The Surveyor is to examine the state of the upper deck and coamings, the bolt fastenings and the outside planks through which they pass, and all other parts as far as they can be seen.

All yellow metal bolts to be tested where practicable, to ascertain if any are broken.

The condition of the caulking is to be ascertained, and the windlass, if of wood, to be unhung, and its wood lining sufficiently stripped for examination.

^{*} Anchors of less weight than 168 lb., exclusive of stock, are not required to be tested.

The cables to be removed from the lockers and ranged, and, with the anchors and general equipment, examined and reported upon.

CONTINUATION OF THE A CLASS.

Section 42. If on the termination of the period of original classification, or if, at any subsequent period, not exceeding two-thirds of the number of years assigned originally, or on Restoration,* the Owner should wish to have his vessel remain or be replaced on the letter A, a request should be made in writing, and the Committee will direct a Special Survey as follows, to be held by a Surveyor to the Society.

The period assigned for Continuation will commence from the time the ship may have gone off the letter A, without regard to the date when the Survey for this purpose may have been held. This period may be either one-third or two-thirds the number of years assigned originally, dependent on which of the following Surveys, designated Survey No. 1 and Survey No. 2, be complied with.

Yachts so continued shall be distinguished in the Register

by the number of years for which the Character is extended being inserted under the number assigned on the original Character, thereby denoting that the vessel has been found on Survey in such good and efficient condition as to entitle her to be continued for the specified number of years.

But if during the last year of the period assigned originally, the Owner of the vessel shall, in consequence of her being about to proceed on a distant foreign voyage, apply to have her Specially Surveyed for Continuation on the letter A, a Special Survey shall be held in accordance with this Section.

Where such Continuation is assigned, the Half-time Survey, as prescribed in Section 41, is to be held, and the vessel, when practicable, to be subject to Annual Survey.

In cases of the repair of yachts for Continuation of the A Character, materials of a lower grade than those used in the original construction of the vessel will be permitted to be used, but they will be noted in the Yacht Register.

Should the materials thus used be not removed on Restoration, the term of Restoration will be reduced, the reduction being regulated by the Mixed Material Rule, Section 26.

^{*} For further Continuation after Restoration, see Section 44.

SURVEY No. 1.

The vessel must be either placed in a dry dock or on blocks, so that the keel may be examined. The hold to be cleared and proper stages made both inside and outside. The outside to be scraped bright from the inner edge of the covering board down to 2 feet below the load line.*

The portable ballast in hold to be removed.

All air courses and the limbers to be cleared, and if the vessel has not already got the air courses described in Section 39 of the Rules, they are now to be made.

One treenail to be driven out from every fourth timber between the planksheer and 2 feet below the load line, and at such parts of the bottom as the Surveyor may direct, so as to enable a judgment to be formed as to the state of the treenails and the timbers and planking in the treenail holes, or the condition of the timbers in the way of the cabin fittings may be ascertained by boring, in lieu of driving out treenails.

Bolts, if of iron, in number not less in any case than six on each side, in the range of each tier of beams are to be driven out.

All treenails, bolts, and listings, removed for the examination of the vessel's condition to be from such parts as the Surveyor may direct. Where the middle line bolts are of iron, their condition is to be ascertained; but if this be not practicable, additional bolts of sufficient size must be driven through the keelson, floors, and keel, in each alternate frame, also through the stem, apron, sternpost and deadwood.

All yellow metal bolts to be tested where practicable, to ascertain if any are broken.

The condition of the caulking to be ascertained.

The windlass, if of wood, to be unhung, and the wood lining sufficiently stripped for its examination.

The cables and general equipment to be attended to as prescribed in Section 40.

^{*} If the yacht has been sheathed with metal, under the inspection of a Surveyor, within a period of two years, and it shall appear to the Surveyor that stripping from 2 feet below the load line upwards may be dispensed with, the case will receive due consideration on application to the Committee.

The attention of the Surveyor shall then be particularly directed to the state of the deck and coamings, the binding bolts, whether of iron or copper, and the outside planks through which they pass, the planksheers, waterways and beams, so far as they can be examined; the stem, apron, hawse-timbers, knightheads, breasthooks, sternpost, innerpost, and transoms; the floors, keelsons, and keel; the rudder and windlass or winch; the planking outside and inside, and the treenails; the frame and inner surface of the outside planking, where they can be seen; and the sheer and general form of the vessel.

The yacht to be efficiently repaired where necessary, with suitable materials.

The Surveyor on these points shall transmit to the Committee a detailed Report, accompanied by such observations as may occur to him from inspection of the vessel, or from information as to the repairs she may have received.

If, from the Report of such Special Survey, she shall appear to be in a sound and efficient state, the Committee shall continue her on the letter A, for such further period as they may think fit, not exceeding, however, one-third of the number of years which had been assigned originally.

SURVEY No. 2.

In order to render a yacht eligible to be continued on the A Character for a longer period than one-third and not exceeding two-thirds of the number of years originally assigned, the following requirements must be carried out in addition to those specified for Survey No. 1.

All sheathing to be entirely stripped off the bottom and elsewhere.

All the treenails in one strake of the topsides fore and aft on each side are to be removed.

A plank in the topsides amidships, or corresponding ceiling under the clamp is to be removed on each side.

A short plank to be removed in each bow and each buttock.

If the vessel has close ceiling, a plank or a listing (not less than 4 inches wide) is to be removed on each side at the floor heads, for one-fifth the length of the vessel at each end, and for the remaining three-fifths of the vessel's length, the state of the timbers is to be ascertained by driving out a treenail from every fourth timber, in one or other of the strakes of bilge planking, or by boring where there are no treenails.

The condition of the deck beam ends must be ascertained by the removal of deck plank or by boring and sounding.

The state of the deadwood forward and aft is to be ascertained by boring.

Where a lead hanging keel is fitted, the bolts are to be carefully examined.

If from the Report of such Special Survey the yacht shall appear to be in a sound and thoroughly efficient state, the Committee shall continue her on the letter A for such further period as they may think fit, not exceeding, however, two-thirds of the number of years which had been assigned originally, or such as might have been assigned.

RESTORATION OF THE A CHARACTER.

Section 43. If at any age of a yacht the Owner be desirous to have her Restored to the A Character, such Restoration will be granted for a period of one-half of the term originally assigned (but in no case will the number of years so granted be less than five), the time to be reckoned from the date of such repairs, provided that a Special Survey, as hereafter described, be held by a Surveyor to the Society, and that all repairs found necessary be completed to his satisfaction.

SURVEY FOR RESTORATION.

The vessel must be placed in dry dock, or on blocks, so that the keel may be examined. All sheathing to be entirely stripped off the bottom and elsewhere.

All the outside planking from 2 feet below the loadline upwards, including the covering board, waterways, stem, knightheads, and hawse-timbers, and the sternpost and rudder where exposed; also the shelves, clamp, all inside planking, and the keelsons to be scraped bright.

The hold to be cleared, and proper stages made, both inside and outside.

The portable ballast in hold to be removed.

All air courses and the limbers to be cleared. The condition of the timbers of the frame to be further ascertained by the removal of one strake of topside planking, all fore and aft on each side. In addition, a short plank to be removed in each bow and each buttock.

In all cases the outside planks through which the chain and preventer bolts pass must be removed.

The covering board all fore and aft to be removed.

One treenail to be driven out from every fourth timber between 2 feet below the load water-line and the covering board; also one to be driven out from every fourth timber for half the vessel's length amidships on each side, at the bilge, and at such other parts of the vessel as the Surveyor may deem necessary, in order that the state of the treenails, and the timbers and planking in the treenail holes, may be ascertained.

Bolts, if of iron, in number not less in any case than six, on each side, in the range of each tier of beams are to be driven out.

Where the middle line bolts are of iron their condition is to be ascertained; but if this be not practicable, additional bolts of sufficient size must be driven through the keelson, floors, and keel, in each alternate frame; also through the stem, apron, sternpost, and deadwood.

Where the vessel is close ceiled, a strake of ceiling is to be removed all fore and aft, in the range of the first futtock heads, or at such height forward and aft as may, in the judgment of the Surveyor, best expose the timbers of the frame to view. One plank of ceiling on each side at the floor-heads to be removed.

A short fore and after hood is to be removed in way of the deadwood on one side of the vessel. Where a lead hanging keel is fitted, the bolts are to be carefully examined. In order to ascertain the condition of the deck beam-ends amidships, deck planks next the waterway to be removed. At the ends of the vessel the beams may be tested by boring and sounding.

All treenails, bolts, listings, and planking, removed for the examination of the vessel's condition, to be from such parts as the Surveyor may deem necessary.

All yellow metal bolts to be tested, where practicable, to ascertain if any are broken.

The condition of the caulking to be ascertained.

The windlass to be unhung, and the wood lining sufficiently stripped for its examination.

The anchors, cables, and general equipment to be attended to as prescribed in Section 40.

When in the state above described, the yacht is to be submitted to a special examination, at which the attention of the Surveyor is to be particularly directed to the state of the deck and coamings; the binding bolts, whether of iron or copper, and the planks through which they pass; the waterways and beams, as far as they can be examined; the stem, apron, hawse-timbers, knightheads, breasthooks, sternpost, and transoms; the floors, keelson, and keel; the

rudder and all its parts and hangings; the planking outside and inside, and the treenails; the frame and inner surface of the outside planking, where they can be seen, and the sheer and general form of the vessel.

If, after the above examination, the Owner should consent to take out all planks, timbers, beams, knees, waterways, fastenings, and other parts that may be found defective, or objected to, and replace them with materials of the same species or of equal quality to that required in vessels of two-thirds the number of years (by their timber material) of her original construction, then she will be entitled to be Restored to the A Class for a period not exceeding one-half the number of years originally assigned.

Yachts Restored, to be subject to annual survey, when practicable, and also to a half-time survey, as prescribed in Section 41.

Where vessels have undergone extensive repairs, or been nearly rebuilt, and a report is forwarded from the Surveyor showing fully the extent of the repairs, and the timber materials used in the same, the Committee will be prepared, on application from the Owner, to consider her claims to a longer period than that stated above.

Relaxations will be admitted according to circumstances and the size of the yacht, but in all cases the requirements considered necessary by the Surveyor, and the Relaxations, must be submitted for the approval of the Committee.

CONTINUATION AFTER RESTORATION.

Section 44. Yachts which have been Restored will be entitled to Continuation, subject to the same conditions of Survey and Examination as are prescribed for yachts proposed to be Continued under the Special Survey No.2, at the expiration of the period first assigned to them; and in like manner, the term of such extended Continuation will be limited to a period not exceeding two-thirds of the number of years for which the vessel may have been Restored, without any reference whatever to the period originally assigned to her.

SPECIAL SURVEYS TO BE HELD ON YACHTS CLASSED A WITHOUT A TERM OF YEARS.

SECTION 45. SPECIAL SURVEY No. 1 to be held at the end of four years from the date of build, is to be the same as that required for the "Half-time" Survey (Section 41) for yachts classed A for a term of years.

SPECIAL SURVEY No. 2, to be held at the end of eight years from the date of build, is to be the same as that required for Special Survey No. 2, for Continuation, Section 42.

SPECIAL SURVEY No. 3, to be held at the end of twelve years from the date of build, is to be the same as that required for Restoration, Section 43.

At the expiration of four years from the date of this latter Survey, the Special Survey No. 2, described above, will have to be again complied with; and at a further period of three years from the date of this latter Survey, Special Survey No. 3, must be complied with—and so on, Special Surveys No. 2 and No. 3 will become due at alternate periods of three and four years respectively.

YACHTS NOT SURVEYED WHILE BUILDING.

Section 46. Existing yachts not built under survey, for which a class may be sought, must, in order to render them

eligible for the Class A for a term of years in the Yacht Register, be specially surveyed, such Special Survey to be governed by the age of the vessel; but in no case will the requirements of the Survey be less than that specified for Special Survey No. 1, for Continuation, Section 42. In addition to this, where the vessel is of such an age that the term of years to which she might have been originally entitled has expired, the requirements of the Second Rule for Continuation or the Restoration Rule, Sections 42 and 43 respectively, must be complied with according to the age of the vessel.

Vessels for which a class is sought, and which would not be eligible to class A with a term of years must be specially surveyed in accordance with the requirements of the periodical Surveys (see Section 45) for such vessels according to their age, but in no case will the requirements of the Survey be less than those specified for Special Survey No. 1 for Continuation, Section 42.

WOOD YACHTS.

TABLE 1.

Exhibiting the Number of Years to be assigned to the different descriptions of Timber used in Yachts built according to the Suggested Rules and Tables; the same to be of good quality, properly seasoned, and free from defects.

LLOYD'S REGISTER OF SHIPPING, 8th April, 1880.

SUGGESTIONS FOR THE CONSTRUCTION AND CLASSIFICATION OF IRON YACHTS.

IRON YACHTS will be classed \bigwedge , with a numeral prefixed, so long as, on careful annual and periodical Special Surveys, they are found to be in an efficient condition.

100 "Yacht" will denote yachts that have been built in accordance with, or equal to, the suggested Rules and Tables for Yachts. Vessels which in some respects are deficient of the requirements for the 100 Class, may, if the Committee approve, be classed 90 "Yacht."

Iron Yachts already built to which the Rules do not apply may, if found on Survey to be well built and efficient, be classed \bigwedge without a numeral prefixed.

N.B.—It is to be distinctly understood that the numerals prefixed to the letter \bigwedge do not signify terms of years, but are intended for the purpose of comparison only; the \bigwedge character assigned being for an indefinite period, subject to annual and periodical Surveys.

All vessels to be submitted to occasional or annual Surveys when practicable.

To entitle them to retain their characters in the Register they must be specially Surveyed every four years, as hereafter described. At the time of any Survey, the comparative numeral will depend on the thickness of the plating and angle iron, and the general condition of the Vessel.

SURVEYS WHILE BUILDING:

SPECIAL SURVEY.

SECTION 1. The Surveyors are to examine during the progress of a yacht the materials and workmanship, from the laying of the keel to her completion; and to point out, as early as possible, anything that may be objectionable.

If upon completion of the vessel she be favourably reported to the Committee she will have the distinctive mark, thus 4, assigned to her in the Register, showing that she has been built under Special Survey.

ORDINARY SURVEY.

1st. On the several parts of the frame, when in place and complete, and before any plating is wrought.

2nd. On the plating, during the progress of riveting. 3rd. When the vessel is complete, but before the plating is finally coated or cemented.

4th. After the vessel is launched and equipped.

SURVEY OF ENGINES AND BOILERS.

In steam yachts the engines and boilers are to be inspected throughout their construction, the boilers tested by hydraulic pressure, the safe working pressure fixed, and the machinery tested under steam. Machinery certificates will be granted, and notifications thereof made in the Register thus—"Lloyd's M.C., 1, 78," in red (i.e., Lloyd's Machinery Certificate, January, 1878).

SUGGESTED RULES FOR THE BUILDING OF IRON YACHTS.

SECTION 2. The scantlings given in Table 5 are intended for Yachts the length of which does not exceed eleven times their depth from top of keel or seven times their extreme breadth. Where this proportion is exceeded, additional strengthening will be required (see Section 38).

The measurements for regulating the proportions and scantlings are to be taken as follows:—

LENGTH.*

The length is to be the distance from the fore part of the stem to the afterpart of the sternpost on the range of the upper deck.

BREADTH.

The breadth is in all cases to be the greatest breadth of the vessel.

DEPTH.

The depth is to be taken from the upper part of the keel to the top of the upper deck beam amidships.

SCANTLINGS.

Section 3. The scantlings of the frames, reversed frames, and floor-plates, and the thickness of bulkheads in Table 5 are regulated by numbers, which are produced by

^{*} When the length of the counter abaft the sternpost exceeds one-eighth of the length measured as above, the excess of length of counter is to be added to this length for the length to be used in calculating the proportions and numbers for scantlings; and where the stem forms a cutwater, the length is to be measured from the place where the deck beam line would intersect the fore edge of the stem, if it were produced in the same direction as the part below the cutwater.

adding together the measurements, in feet, of the half-moulded breadth of the vessel amidships, the depth from the upper part of keel to the top of the upper deck beams, and the girth of the half midship frame section of the vessel, measured from the centre line at top of keel to the upper deck stringer plate.*

The scantlings of the keel, stem, sternpost, keelson and stringer plates, the thickness of the outside plating and deck; also the scantlings of the angle irons on beam stringer plates and keelson and stringer angle irons in hold as in Table 5, are governed by the number obtained by multiplying that which regulates the sizes of the frames, &c., by the length of the vessel.

QUALITY OF IRON.

SECTION 4. The whole of the iron used in the construction of yachts and their fittings to be of a good malleable quality, capable of withstanding a tensile strain of not less than twenty tons per square inch with, and eighteen tons across, the grain; and to be subjected to other tests at the discretion of the Surveyors. Brittle, or inferior material to be rejected. All plate, beam, and angle iron to be legibly stamped in two places with the manufacturer's name or trade-mark, and the place where made, which is also to be stated in the report of Survey.

WORKMANSHIP.

SECTION 5. The workmanship to be well executed, and submitted to the closest inspection and amended where necessary before being coated or painted.

KEEL, STEM, STERN AND PROPELLER POSTS.

Section 6. The keel, stem, stern and propeller posts are to be either scarphed or welded together, and to be in size according to Table 5, if scarphed, the lengths of scarph to be not less than nine times the thickness given in the table for keels.

If the keel is of extra size, so as to act as ballast, the garboard strake should be increased in thickness.

The stern and propeller posts, and after end of keel for single screw-propelled yachts, to be double the

^{*} Where from extreme fineness of form or hollowness of midship section, the girth and numbers for scantlings are unduly increased, the case will receive the special consideration of the Committee.

sectional area prescribed for keels in Table 5, the portion adjoining the keel to be tapered fair into it.

The portion of the forging of the stern frame, forming part of the keel, is to extend sufficiently forward for the after end of the scarph in sailing yachts and paddle steamers to be at least once-and-a-half the frame space before the sternpost; and in screw-propelled vessels, at least twice-and-a-half the frame space before the propeller post. The rudder braces to be forged on to the sternpost.

FRAMES.

Section 7. The spacing of the frames from centre to centre to be as in Table 5.

The frames to be of the dimensions set forth in Table 5, to extend from keel to gunwale.

When it is intended to carry ballast between the floors, the frames are to be doubled with angle irons of the same size as the frame angle irons, and extending above the height of the ballast. The rivet holes to be punched through from the faying surfaces of the frames, and they are not to be punched at the turn of the bilge until after the frames are bent to the required shape: the

holes in way of the lands of the plating are to be drilled after the plating is wrought.

Frame angle irons six-sixteenths thick amidships may be reduced to five-sixteenths for a length of one-fifth of the vessel's length from each end.

FLOOR-PLATES.

Section 8. The floor-plates to be in size at the middle line not less than the size given in Table 5 for half the length amidships,* excepting under the boilers of steam yachts, where the floor-plates are to be one-sixteenth of an inch thicker. They are to extend in a fair curve well up the bilges, or if made straight across on the upper part, the depth is to be increased. The floors forward and aft are to be carried high enough to give ample room between the reversed frames, on each side of the vessel for fitting the keelson angle irons. The thickness of the floor-plates for half the length amidships to be as given in Table 5; but for one quarter of the vessel's length at each end

^{*} Where the form of the yacht is such as to render a departure from this condition desirable, the approval of the Committee must be previously obtained thereto.

they may be reduced one-sixteenth of an inch when the plates amidships are five-sixteenths and above.

A floor-plate to be fitted and riveted to every frame, and to be extended across the middle line except where a vertical centre plate keelson is adopted, in which case the floor-plates are to be efficiently connected to it on each side by double vertical angle irons of not less size than the reversed frames. Floor-plates to which bulkheads are attached must be deeper than the adjacent floor-plates, to admit of the bulkheads being riveted to them above the reversed angle irons.

Watercourses to be formed where required for the efficient drainage of the vessel. Transom plates are to be fitted and connected to the frames, and to the sternpost where practicable, so as to efficiently support the counter.

REVERSED ANGLE IRONS ON FRAMES.

Section 9. Reversed angle irons on frames to be in size as per Table 5.

Yachts where the number for regulating the frame is below 3,500 are not required to have reversed frames except under the ballast, or the engines and boilers in steam vessels.

Yachts where the number is 3,500 and under 6,500 are to have reversed angle irons riveted to every frame and floor plate, extending across the middle line to the upper part of the cabin flat.

Yachts where the number is 6,500 and above, to have reversed angle irons extending to the upper part of the cabin flat and the gunwale alternately.

Steam vessels to have an additional reversed angle iron on floors under engines and boilers.

In all sailing yachts, increased strength should be given to the transverse framing in way of each mast, according to the size and rig of the vessel. This may be done by increasing the size of the frames, in way of these parts, by spacing them closer together, or by fitting reversed angle irons on each of these frames extending to the gunwale.

In vessels having ballast on the upper part of the floors, an additional reversed angle iron is to be fitted to each floor under the ballast. The rivets for securing the reversed angle irons to the frames and floor-plate, to be in diameter according to the greatest thickness of angle or plate iron through which they pass, and to

be spaced seven times their diameter from centre to centre.

MIDDLE LINE KEELSONS.

SECTION 10. Yachts where the number for regulating the keelson is under 2,000 are not required to have middle line keelsons. Vessels where the number is 2,000 and under 2,600 are to have a double angle iron keelson of the size required by Table 5.

Yachts where the number is 2,600 and under 3,000 are to have a bulb plate fitted between double angle irons of the size required by Table 5.

Yachts where the number is 3,000 and above are to have a single plate keelson, with double angle irons fitted at the upper and lower edges. The dimensions of the plate keelson and angle irons are to be of the sizes given in Table 5. All butts to be properly shifted and efficiently secured. Other forms of keelsons will be admitted if of equal strength to those in the Rules.

In all cases the middle line keelson is to extend as far forward and aft as practicable.

STRINGERS IN HOLD.

Section 11. The stringers in hold are to be carried as far forward and aft as practicable, and to be efficiently connected at their ends by plates forming hooks and crutches.

In yachts where the number for regulating the stringers is under 1,200 a bilge stringer is to be fitted of single angle iron of the size prescribed in Table 5.

In yachts, where the number is 1,200 and under 7,000 double angle iron stringers are to be fitted at the bilge, and where the number is 2,600 and above, a double angle iron stringer is to be fitted between the bilge stringer and middle line keelson. In yachts with a flat floor, double angle iron side keelsons must be fitted on each side of the vessel, with washplates fitted between the angle irons.

DETAILS RELATING TO KEELSONS AND STRINGERS.

SECTION 12. All angle irons for keelsons and stringers are to be in long lengths properly shifted, and wherever butted to be connected with angle iron fitted in the throat of them,

properly riveted to each flange. In all cases, the middle line, side, and bilge keelsons are to be carried fore and aft continuously through the bulkheads, the latter being made watertight around them; and where such parts of the vessel are necessarily separated, the longitudinal strength is to be efficiently maintained to the satisfaction of the Surveyors. The middle line keelson plates may be reduced in thickness forward and aft, to the same extent as allowed in the floor-plates; or the former may be proportionally reduced in depth at the ends of the vessel.

BEAMS.

Section 13. Beams are to be of the form and size given in Table 6, or they may be composed of any other approved form equal in strength. They are to be fitted and fastened to alternate frames, with bracket ends or knee plates, in length not less than twice-and-a-half times the depth of the beam.

Mast and windlass beams, and beams under deck houses, and the heel of bowsprit, must be of increased size or additionally strengthened to the satisfaction of the Surveyor.

STRINGERS ON BEAMS.

Section 14. All yachts to have stringer plates upon the ends of the upper deck beams of the dimensions given in Table 5 for half the vessel's length amidships; from thence to the ends of the vessel they may be gradually reduced to the dimensions given in Table 5.

In vessels where the number is above 7,000 stringer plates are to be fitted on the ends of the lower deck beams, of the dimensions given in Table 5 for the ends of upper deck stringer plates, for half the vessel's length amidships; from thence to the ends of the vessel they may be gradually reduced to three-fourths of their midship breadth, and one-sixteenth less in thickness.

The upper deck stringer plates on beams are to be fitted closely to and connected with the outside plating all fore and aft, with angle irons of the size given in Table 5.

When a lower deck stringer is fitted, an angle iron, extending all fore and aft, riveted to the frames and to the stringer plates, must be fitted.

If the wood roughtree stanchions are fitted by cutting through the stringer plate, the stringer must be increased in proportion.

TIE-PLATES ON BEAMS.

SECTION 15. Yachts, where the number is over 1,200 to have tie-plates, ranging all fore and aft, upon each side of the hatchways. Diagonal tie-plates, of the dimensions given in Table 5, are to be fitted abreast of the masts in sailing vessels, or auxiliary screw vessels.

PILLARS.

SECTION 16. Beams to be pillared where practicable; the pillars to have solid welded heads and heels, with not less than two rivets in each end.

PLATING.

Section 17. The thickness of plating for half the vessel's length amidships, to be as given in Table 5. All outside plating (excepting the garboard strakes and boss-plates of screw steam vessels), if not less than five-sixteenths of an inch in thickness amidships, may be reduced one-sixteenth of an inch for a fourth of the vessel's length at each end; when the plates are ten-sixteenths of an inch in thickness and above amidships, a reduction will be allowed of one-sixteenth of an inch for an eighth of the vessel's length before and abaft

the half-length amidships; and the remaining plates at the ends may be two-sixteenths of an inch less in thickness than those of their respective strakes amidships. No plates to be less in length than five spaces of frames, except the fore and after hoods. No butts of outside plating in adjoining strakes to be nearer each other than two spaces of frames, and the butts of the alternate strakes not to be under each other, but shifted not less than one frame space. The butts of the upper deck stringer plates, in all cases to be shifted not less than two spaces of frames clear of the butts of the sheerstrakes.

The butts of the garboard strakes to be shifted clear of the keel scarphs, and not to be nearer each other on opposite sides of the vessel than two spaces of frames. All butts of plating, where practicable, to be planed and fitted close; the edges of the plating to be sheared from their faying surfaces, or the burr caused by shearing to be carefully chipped off, and all outside edges of plating are to be either planed or chipped fair. The butts and edges to be carefully caulked.

The garboard strakes of screw-propelled yachts if seven-sixteenths of an inch, or more, in thickness, may be

reduced one-sixteenth of an inch, before the half-length only. The garboard strakes of sailing yachts or paddle-steamers, if seven-sixteenths of an inch or more in thickness, may be reduced one-sixteenth of an inch before and abaft the half-length of the vessel.

The boss-plates covering the screw shaft are to be of the same thickness as the strakes amidships of which they form part.

BUTT-STRAPS.

Section 18. The butt-straps, where double riveting is to be adopted are to be in breadth thirteen times the diameter of the rivets, and in no case to be less in thickness than the plates they connect; the fibre of the iron to be in the direction of the fibre of the plates they connect.

LINING PIECES.

Section 19. The spaces between the outer strakes of plating and the frames to have solid filling or lining pieces, in one length, closely fitted; they are to be of the same breadth as the frames, excepting in way of bulkheads, where they are to be fitted, as stated in Section 21.

RIVETS AND RIVETING.

Section 20. The stem, stempost, and keel, when the plating is four-sixteenths of an inch and above in thickness, are to be double riveted; the butts of outside plating and stringer plates, when five-sixteenths of an inch in thickness and above, are to be double riveted.

The upper edge of garboard, and the lower edge of sheerstrake, to be double riveted, where these exceed six-sixteenths of an inch in thickness. The remaining edges of the outside plating may be single riveted.

In chain-riveted butts, a space equal to twice the diameter of the rivet to be between each row; and where they are treble riveted half the number of rivets in the back row should be omitted.

The overlaps of plating, where chain-riveting is adopted, are not to be less than six times the diameter of the rivets; and where single riveting is admitted, to be not less than three-and-a-half times the diameter of the rivets.

The rivets are not to be nearer to the butts or edges of the plating, butt-straps, or in any angle iron, than a space equal to their own diameter; and in edge riveting, the space between any two consecutive rows of rivets must not be less than one-and-a-half times their diameter.

The rivet holes to be regularly and equally spaced and carefully punched from the faying surfaces opposite each other in the adjoining parts, laps, lining pieces, butt-straps and frames, and to be properly countersunk where necessary. They are to be spaced not more than from four to four-and-a-half diameters apart from centre to centre, excepting in the keel, stem, and sternpost, where they may be five diameters; and through the frames and outside plating, and in reversed angle irons or frames, where they may be seven diameters apart from centre to centre. The rivets in the flanges of the gunwale angle irons to be spaced not more than fourand-a-half diameters apart from centre to centre, and those connecting stringer plates to the beams to be spaced from six to seven diameters apart. The rivets are to be of the best quality, and to be in diameter as per Table 7, and to be increased in size under the heads to fill the rivet holes. When riveted up, the rivets are completely to fill the holes, their heads are to be "laid

up," and their points or outer ends in the shell plating are not to be below the surface.

BULKHEADS.

Section 21. Steam vessels where the number is 1,500 and above, are to have iron watertight engine and boiler room bulkheads, and the space around the stern tube must be enclosed in an iron watertight compartment, and all vessels, when the number is 7,000 and above, are to have an iron watertight bulkhead fitted forward.

All plating of bulkheads to be of the thickness prescribed in Table 5, and when fitted between two frames at each side of the vessel, to be strongly riveted through them, or if attached only to one frame, then to have brackets or knee-plates riveted horizontally against the side plating of the vessel, and to the bulkheads on the fore side and aft side alternately, near the middle of each strake of the outside plating, and to be strongly riveted thereto. Lining pieces, between frames and outside plating, in way of bulkheads, are to extend in one piece from the fore side of the frame afore to the aft

side of the frame abaft the bulkhead frames. The bulkheads to be supported by angle irons, in an efficient manner.

All bulkheads to be caulked and made thoroughly watertight, to the satisfaction of the Surveyor.

Watertight bulkheads must be fitted with sluice valves or cocks, to allow the water to reach the pumps; the valves or cocks must be fitted so as to be controlled above the load water-line, and to be boxed in to prevent injury.

WOOD DECKS.

Section 22. The flat of decks to be of good quality, properly seasoned, free from sap and objectionable knots, and the thickness to be as per Table 5.

HATCHWAYS AND MAST PARTNERS.

Section 23. All hatchways are to be properly framed, to receive half beams, where required, and the mast-holes to have partners at the upper deck, the plating of which is not to be less in thickness than is required for stringer plates, and the breadth of the plate outside the mast-hole is not to be less than the diameter of the mast. The plate to be well riveted to the beams, and an angle iron,

of the dimensions required for the main frame of the vessel, is to be properly fitted and riveted to the plate round the mast-holes. Plates are to be fitted and riveted to the beams, where necessary, in order that the ends of the deck planks may be properly fastened.

Half beams are to be fitted to alternate frames between the hatchway beams, and their ends are to be secured by the angle irons on the upper edges, being made kneeshaped, and fitted and riveted to the fore and aft carlings. In addition, fore and aft tie-plates, of the dimensions given in Table 5, are to be fitted close to the coamings, and riveted to the beams and half beams.

ENGINE SKYLIGHTS.

Section 24. The skylights to engine rooms are, in all cases, to be substantially constructed; the coaming to which they are attached, should be of iron, efficiently fastened to the beams.

The skylights to be securely attached to the coamings, and the glass in them should be protected; and in addition, dead-lights must be fitted, and arrangements made for their efficient security in bad weather.

CEILING.

SECTION 25. Where ceiling is fitted in yachts, it should be secured in such a manner as to be easily removed for the purpose of Survey, or for cleaning and painting. It is recommended, that the cabin fittings against the side of the vessel should be fitted so as to be easily removed when required.

ENGINE AND BOILER BEARERS.

Section 26. In steam yachts, the engine and boiler bearers must be properly constructed, and the engine seatings efficiently secured to them.

In vessels where the number is 3,500 and above, double reversed angle irons must be fitted across the vessel to every floor under engines and boilers; and under the boilers the floor-plates must be increased one-sixteenth of an inch in thickness.

COAL BUNKER, PIPES, AND LIDS.

SECTION 27. Coal bunker openings are to be fitted with gratings and lids, and the lids must be secured with approved fastenings.

PORTS AND SCUPPERS.

Section 28. A sufficient number of ports and scuppers are to be fitted to relieve the deck of water.

CHAIN PLATES.

Section 29. The chain plates are to be efficiently connected to the outside plating, the sheerstrake being preferable.

CEMENT.

Section 30. The frames and plating of the bottom of all vessels to be efficiently covered with Portland or other approved cement, which may be mixed with clean sharp sand; care is to be taken to have a proper substance of cement at its termination, and to keep the watercourses clear all fore and aft.

RUDDER.

SECTION 31. The rudderhead and frame to be of the best hammered iron of the size given in Table 5, and to be formed in one forging, properly stayed with wroughtiron stays welded on the frame. The plating to be carefully fitted and riveted.

WINDLASS, OR WINCH.

SECTION 32. The windlass, if of wood, to have in all cases the iron spindle in one length, passing through the body of the windlass. If a winch is fitted, it must be efficiently secured.

PUMPS, &c.

Section 33. Efficient pumps must be supplied, to be worked from the upper deck, and fitted to the satisfaction of the Surveyor.

All head and stern pumps to be efficiently provided with stop-cocks, to the satisfaction of the Surveyor.

When soil-pipes are of lead, they must be of substantial thickness.

EQUIPMENT.

Section 34. All yachts are required to have their masts, spars, and rigging, the rudder, pumps, windlass or capstan, scuppers, and hawse-pipes in good order, and sails in sufficient number, and in good condition. The efficient state and condition of the whole of the yacht's equipment will be

designated by the figure 1 following the character assigned. The equipment is to be regulated by the tonnage as for wood yachts, see Section 25.

The anchors,* cables, &c., are to be of approved quality, properly tested at a licensed public machine, and in number and length as set forth in Table 9.

A certificate of all chains and anchors having been tested, showing the strain applied to them, must be produced before the yacht is classed with the figure 1.

ENGINES AND BOILERS OF ALL STEAM YACHTS.

SECTION 35. The boiler and machinery are to be considered as part of the equipment, and unless the Surveyor is satisfied of their efficiency, the figure 1 will be withheld.

In new steam yachts, and in yachts fitted with new engines or boilers, the machinery is to be submitted to the

^{*} Anchors of less weight than 168 lb., exclusive of stock, are not required to be tested.

inspection of the Society's Engineer-Surveyor, who will furnish a report to the Committee describing the same. The Committee will, thereupon, if the machinery has been found satisfactory, grant a Certificate and insert in the Register Book the notification "Lloyd's M.C.," in red (i.e. Lloyd's Machinery Certificate), indicating that the engines and boilers are certified to be in good order and safe working condition.

Unless this inspection be held, and the Engineer-Surveyor be satisfied with the efficiency of the machinery, the figure 1 will be withheld from the vessel's class. In order to facilitate this inspection, the plans of the boiler are to be examined and from them the working pressure fixed.

The boiler, together with the engines, to be inspected at different stages of construction.

The boiler to be tested by hydraulic pressure, in the presence of the Engineer-Surveyor, to twice the working pressure, and carefully gauged while under test.

Two safety-valves to be fitted to the boiler, and loaded

to the working pressure in the presence of the Surveyor.

If common valves are used, their combined areas are to be at least half a square inch to each square foot of grate surface.

If improved valves are used, they are to be tested under steam in the presence of the Surveyor; the accumulation in no case to exceed 10 per cent. of the working pressure.

Each valve to be arranged so that no extra load can be added when steam is up, and to be fitted with easing gear which must lift the valve itself.

The safty-valve spindles to extend through the covers and be fitted with sockets and cross handles, allowing them to be lifted and turned round in their seats, and their efficiency tested at any time.

The boiler to be fitted with a blow-off cock, independent of that on the vessel's outside plating; the blow-off cock to be so constructed that the spanner or key can be fixed or taken off only when it is shut.

COCKS, PIPES, AND SEA CONNECTIONS.

With a view to insuring better control over cocks, valves, and pipes connecting the engines and boilers with the sea, they are to be fixed as follows, viz.:—

Sea-cocks to be fitted on the plating of the vessel, above the level of the stoke-hole and engine room platforms, or attached to Kingston valves of a height sufficient to lift them up to the level of these platforms.

Discharge-pipes to be, if possible, carried above the loadline, and to have discharge-valves fitted on the plating of the vessel. No pipes to be carried through the bunkers without being properly protected.

Bilge suction-pipes to be arranged to pump direct from each compartment, the roses to be fixed in places where they can be easily accessible.

Cocks and valves connecting all suction-pipes to be fixed above the stoke-hole and engine room platforms.

The arrangement of pumps, bilge injection, suction and delivery pipes, to be such as will not permit of water being run from the sea into the vessel by an act of carelessness or neglect. Any defective arrangement to be reported to the Committee.

ENGINES AND BOILERS OF YACHTS ALREADY BUILT.

SECTION 36. The engines and boilers of yachts already built, for which a class in the Yacht Register may be sought, are to be examined by one of the Society's Engineer-Surveyors, and a report made to the Committee on their condition and efficiency. All objectionable parts, arrangements and fittings are to be removed or made efficient to the satisfaction of the Engineer-Surveyor to render the vessel eligible for Classification in the Yacht Register.

PERIODICAL SURVEYS OF ENGINES AND BOILERS.

SECTION 37. At each special periodical Survey of steam yachts classed in the Register, the condition of the engines and boilers is to be ascertained and reported upon.

VESSELS OF EXTREME PROPORTIONS.

SECTION 38. Iron yachts, the lengths of which exceed eleven times their depth or seven times their breadth, will be required to have additional longitudinal strength applied beyond that stated in the foregoing Rules, and in Table 5, either by means of additional double

and treble riveting at the butts, by increasing or doubling the sheerstrake, or by such other means as may in each case receive the approval of the Committee.

SPECIAL PERIODICAL SURVEYS TO BE HELD EVERY FOUR YEARS.

Section 39. Survey No. 1.—The vessel to be placed on blocks in a dry dock or on ways, so that the bottom and keel may be properly examined.

All portable ballast in hold to be removed, and the hold cleared and limber boards lifted.

Where the vessel is ceiled, one strake fore and aft on each side is to be removed, and both surfaces of the outside plating exposed.*

Survey No. 2.—In addition to the requirements of Survey No. 1, two other strakes of ceiling, in vessels close ceiled, must be removed all fore and aft on each side.

The windlass at this and all subsequent alternate Special Surveys to be unhung where necessary, and its wood linings sufficiently stripped for examination. The chain cables are also to be ranged for inspection.

Survey No. 3.—In addition to the requirements of Surveys Nos. 1 and 2, sufficient ceiling is to be removed to enable the Surveyor to examine the whole of the frames and plating; coal bunkers of steam vessels to be cleared; the stringers, hooks, floor-plates, keelsons, engine and boiler bearers, watertight bulkheads, rivets and inner surface of plating to be exposed; all oxidation to be removed from the several parts above named; also from the outside plating, rivets, keel, stem, sternpost, and rudder; the planksheers and waterways, if of wood, to be scraped bright. When the vessel is thus prepared, if it be deemed necessary, the Surveyor is to ascertain the thickness of the plating by having holes drilled. Such parts as may be found defective, or less than three-fourths of the substance by rule, are to be removed and replaced with proper material, equal in substance and quality to the original construction. The planksheers, waterways, flat of decks and their fastenings, are also to be examined and made good where necessary.

^{*} In cases where the inner surface of the bottom plating is coated with cement, or asphalte, if the coating be carefully inspected and tested, by beating or chipping, and found sound and adhering satisfactorily to the iron, its removal may be dispensed with.

Every vessel which has been classed must be submitted to a Special Periodical Survey every four years;—the first according to No. 1; the second according to No. 2; the third according to No. 3; and afterwards according to Nos. 1, 2, and 3 consecutively, at intervals of four years.

In all vessels No. 3 Survey must be complied with before the expiration of thirteen years from the date of build, or from the previous No. 3 Survey.

Vessels which have undergone either of the foregoing examinations will be noted in the Yacht Register thus—s.s. No. 1-78, s.s. No. 2-78, s.s. No. 3-78, indicating the Special Survey and date thereof; and any vessel having passed the time when the foregoing Surveys have become due, and not being marked as above in the Register, will be liable to have her character suspended.

At each of the Special Surveys of steam yachts the engines and boilers are to be examined by an Engineer-Surveyor, and reported upon to the Committee as to their safety and efficiency.

Whenever the engines and boilers are taken out, the bearers, with the floor-plates, keelsons, rivets, &c., under

them, may, at the request of the Owners, be surveyed in anticipation of the above Rule; and whenever the bottom plating is to be cemented, a Survey is to be held prior to the cement being laid.

NOTES ON SPECIAL SURVEYS.

Section 40. Should a yacht at any time be submitted to Special Survey No. 3 before being twelve years old, the subsequent Special Surveys may be Nos. 1, 2, and 3 consecutively, dating from the completion of such No. 3 Survey.

Where the deterioration in thickness is widespread, and it is not deemed advisable by the Owner to renew the material, on a detailed report being made by the Surveyor the class of the vessel will be reconsidered.

To facilitate the arrangements of Owners, a portion only of the requirements of the foregoing Special Surveys may be complied with at the expiration of the time specified, provided that the whole of the Survey be completed within twelve months. The Surveyors in such cases are to give the Owners, or their agents, written notice of the parts

not Surveyed, and are also to report the same to the Committee.

Relaxations will be admitted according to circumstances and the size of the yacht, but in all cases the requirements considered necessary by the Surveyor, and the relaxations, must be submitted for the approval of the Committee.

YACHTS NOT SURVEYED WHILE BUILDING.

SECTION 41. Existing yachts not built under any survey,

and for which a class may be sought, must, in order to render them eligible for a class in the Yacht Register, be specially Surveyed, such Special Survey to be governed by the age of the vessel, but in no case are the requirements of the Survey to be less than that specified for the Special Survey No. 2 for iron yachts; sufficient ceiling to be removed to enable the Surveyor to report on the condition and size of the frames, plating, stringers, &c.

Vessels of twelve years of age, and above, must be subjected to Special Survey No. 3.

SUGGESTED RULES FOR THE BUILDING OF COMPOSITE YACHTS HAVING IRON FRAMES AND WOOD PLANKING.

Section 1. The sizes of the frames and reversed frames, floor-plates, keelsons, angle irons, beams, stringer plates and tie-plates on beams are to be regulated by the requirements for iron yachts of equal size.

Where it is intended to adopt a single thickness of wood planking, the frame space from moulding edge to moulding edge is not to exceed eighteen inches; but if the outside planking is to be in two thicknesses, worked diagonally, the above distance may be somewhat increased, according to the thickness of planking, the extent and mode of fastenings, &c.

The planking when of a single thickness is to be of the same thickness from the garboard strakes to upper edge of wales as required in Table 2 for the wales in wood yachts. Above the wales the thickness of planking may be reduced at the planksheer to the size given for sheerstrakes in the Table for wood yachts.

Composite yachts are to have iron sheerstrakes, bilgestrakes, diagonal plates on the frames, and an iron keel plate on the upper part of the wood keel. Any deviations from the above system of construction are to be distinctly set forth on the plans submitted for approval.

Composite yachts will be classed A for a term of years, according to the timber materials employed, as set forth in Table 8, provided their construction and scantlings are deemed satisfactory by the Committee.

In order to retain the A class in the Register they will be required to undergo the surveys and fulfil the conditions hereinafter stated.

PERIODICAL SURVEYS.

Section 2. All vessels to be surveyed annually if practicable; and whenever the copper or yellow metal sheathing is stripped off, the condition of the planking, fastenings, and caulking to be ascertained.

They are to be subjected to a Special Survey every four years, and such Special Surveys will be noted in the Yacht

Register, and designated s.s.No.1-78, &c. When these Special Surveys are held, the vessel is to be placed on blocks, or upon ways so that the keel and bottom can be examined.

At the FIRST SPECIAL SURVEY the hold must be cleared and ballast shifted. The limber boards, and ceiling, if the vessel be close ceiled, equal to one strake fore and aft on both sides in the hold, below the upper turn of the bilge must be removed, and the vessel examined at all parts where practicable.

At the Second and subsequent Special Surveys, the condition of the floor-plates, frames, and keel plate must be still further ascertained by the removal of ceiling and cement at different parts, and by the removal if necessary of cabin lining sufficient to expose the condition of the frames, &c., in way of the same.

Bolts to be removed for the purpose of ascertaining their condition, and whether there is any wasting in the frames.

At the Second Special Survey the windlass, if of wood, to be unhung, and its wood lining sufficiently stripped for examination. The chain cables to be ranged for inspection.

CONTINUATION ON THE A CLASS.

Section 3. If on the expiration of the term of years originally assigned, or at any age of a composite yacht, the Owner be desirous to have his vessel remain or be replaced on the A class, such continuation will be granted for a period not exceeding two-thirds the number of years assigned originally, provided a Special Survey, as hereafter described, be held by a Surveyor to the Society, and that all repairs found necessary be completed to his satisfaction.

The number of years assigned on Continuation to commence from the date of the completion of such repairs.

The vessel to be placed in dry dock or on blocks, so that the keel and bottom may be examined.

All sheathing to be entirely stripped off the bottom and elsewhere.

The hold to be cleared, and proper stages made both inside and outside.

All the outside planking from 2 feet below the load water-line upwards, including covering board and water-ways to be scraped bright.

The close ceiling from the cabin flat downwards, and before and abaft the cabins, and also one strake of ceiling on each side in way of cabins, must be removed, when, if the condition of the frames and plating render it necessary in the opinion of the Surveyor, the whole of the close ceiling is to be removed.

A plank of the bottom amidships in way of the bilgeplate, and one in the way of the sheerstrake on either side, to be removed.

The condition of the deadwood to be ascertained by boring. Bolts in number from six to twelve, according to the size of the vessel, to be driven out for examination.

Where lead is fitted externally as hanging keels or otherwise the bolts are to be examined.

The cement is to be removed in places for the purpose of ascertaining the condition of the floors, frames, iron keel plate, butt-straps of outside planking, &c.

The windlass to be unhung, and its wood lining sufficiently stripped for examination.

The cables to be ranged, and the anchors and general equipment examined. The coal bunkers in steamers to be cleared, and all ironwork to be scraped clean.

The Annual and Special periodical Surveys to apply to vessels so Continued, as required for yachts on original class.

COMPOSITE YACHTS NOT SURVEYED WHILE BUILDING.

Section 4. Existing yachts not built under Survey, for which a class may be sought, must be Specially Surveyed as follows:—

They must be placed in a dry dock or on blocks, so that the keel and bottom may be examined; the hold to be cleared, the ballast shifted, and the limber boards and one strake of ceiling in the hold removed. The outside planking to be scraped bright where considered necessary.

A sufficient number of fastenings to be removed from the keel and various parts of the outside planking, in order that their condition, and that of the frames through which they pass, may be ascertained.

In addition to this, the requirements of the Special Periodical Survey to which the vessel would be liable according to her age, must be complied with.

Relaxations will be admitted according to circumstances and the size of the yacht, but in all cases the requirements considered necessary by the Surveyor, and the relaxations, must be submitted for the approval of the Committee.

COMPOSITE YACHTS. TA

The following Machines are recognised by the Committee of Lloyd's Register

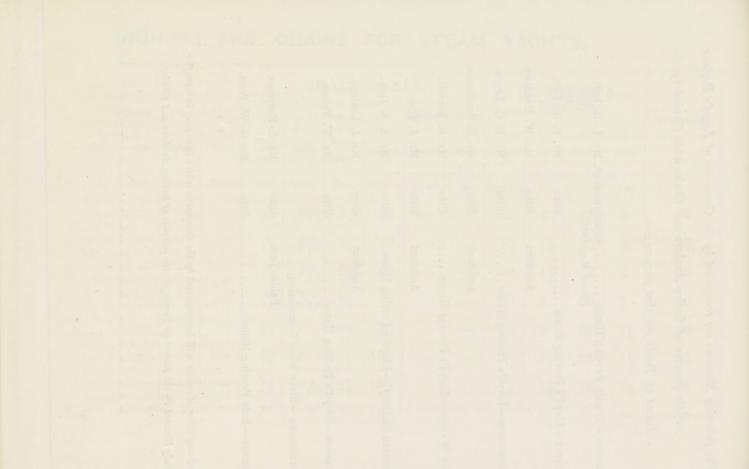

for the purpose of testing Anchors and Chains while licensed by the

Board of Trade for that purpose:—

London-Trinity Proving House Superintendent, Mr. L. R. Isitt. (Closed May, 1875).

Tipton —Lloyd's Proving House..... ditto Mr. E. R. Isitt. Assistant ditto Mr. W. Maddison. NETHERTON-Lloyd's Proving House ditto Mr. D. G. Lewis. Assistant ditto Mr. E. Seedhouse. Low Walker-Lloyd's Proving House ditto Mr. R. Burrell. Assistant ditto Mr. J. Tron. CHESTER (Saltney)—Lloyd's Proving House. ditto Mr. A. S. Jack. Assistant ditto Mr. J. Littler. Glasgow—Lloyd's Proving House ditto Mr. W. Fraser. SUNDERLAND -River Wear Commission, Public Test ditto Mr. J. Hartness. CARDIFF—Bute Proving House ditto Mr. G. W. Penn.

And any other Machine will be recognised by the Committee which is or may be hereafter duly licensed by the Board of Trade for the purpose of testing Anchors and Chains.

KEY TO THE YACHT REGISTER.

IN THE FIRST COLUMN.

The 🛠 signifies that the Vessel has been built under Special Survey.

IN THE SECOND COLUMN.

Asp.—Asphalted. B.Hds.—Bulkheads. C.—Coppered. c.f.—Copper or Yellow Metal fastened in accordance with paragraph No. 1 in Section 36 of the Rules. C.F.—Copper or Yellow Metal fastened in accordance with paragraph No. 2 in Section 36 of the Rules (also for Copper or Yellow Metal fastenings of Composite Yachts). C.T.—Copper or Yellow Metal fastened in accordance with paragraph No. 3 in Section 36 of the Rules. Cem.—Cemented. Cl.—Clincher. F.—Felt. G.I.B.—Galvanized Iron Bolts. I.B.—Iron Bolts. pt.—part. YM.—Yellow Metalled. Z.—Sheathed with Zinc.

IN THE THIRD COLUMN.

BmuBermudian	SchSchooner
c. bCentre Board.	ScwScrew
Cat Catamaran	SlpSloop
CutCutter	SmkSmack
KchKetch	SqSquare Rigged
LatLateen	StmSteamer
LugLugger	St. L Steam Launch
PadPaddle	YwlYawl

IN THE FOURTH COLUMN.

A line thus — placed over the tonnage denotes that the particulars have *not* been obtained from the Registrar-General of Shipping.

IN THE FIFTH COLUMN.

Dots thus placed over the dimensions denote that the particulars have *not* been obtained from the Registrar-General of Shipping.

B.D.20ft.—Bridge deck 20 feet long. F.20ft.—Forecastle 20 feet long. P.20ft.—Poop 20 feet long. R.Q.D.20ft.—Raised quarter-deck 20 feet long. alt.—altered. len.—lengthened.

IN THE SIXTH COLUMN.

Alm.rb.—signifies Almost rebuilt. drp.—damage repaired.
I.F.—Iron Floors. lrp.—large repairs. Mat.—Materials.
N.B.—New Bottom. N.D.—New Deck. NKl.—New Keel. NKlsn.—New Keelson. NTsds—New Topsides.
NW.—New Wales. plk.—Plank. ptO.M.—part Old Materials. retrld.—retreenailed. srp.—some repairs.

For Engines of Steam Yachts, the figures after Cy. represent Diameter of Cylinders and length of stroke in inches. Figures before lb. the Boiler pressure in lb. per square inch. HP.—Horse Power in Official Register. C.—Compound. D.—Diagonal. H.—Horizontal. I.—Inverted. L.—Lever. O.—Oscillating. N.E.&B.—New Engines and Boilers. B.&M.S. in red—Boilers and Machinery surveyed by the Engineer-Surveyors to Lloyd's Register. Lloyd's M.C. in red—Machinery certified by the Engineer-Surveyors to Lloyd's Register. A indicates Special Survey of Machinery or Boilers during construction, thus LLOYD'S M.C., LNE.&B.

d 2

IN THE TENTH COLUMN.

The initials "H.T." (half-time), with the date of the Survey affixed, denote that the half-time or intermediate Survey required by the Rule, Section 41, for Wood Yachts, has been held.

Vessels Surveyed as prescribed in Section 45 of the Rules for Wood Yachts, will be marked in the Register

"S.S.Cly.78."

The records, s.s. Nwc. No. 1-78, s.s. Hul. No. 2-78, s.s. Lon. No. 3-78, denote that the Vessels have been submitted to periodical Surveys, as prescribed in Section 39 of the Rules for Iron Yachts, or Section 2 of the Rules for Composite Yachts.

IN THE ELEVENTH COLUMN.

A.&C.P.—Anchors and Chains proved at a Public Machine. LLOYD'S A.&C.P.—Anchors and Chain Cables tested at Public Machines under the superintendence of the Committee of this Society. (See Table No. 9 in the Rules.)

IN THE TWELFTH COLUMN.

The figures indicate the number of years assigned on Classification.

Vessels Restored to, or Continued on the Character A, under Sections 42, 43, or 44 of the Rules for Wood Yachts, will have the number of Years for which they are Restored or Continued inserted separately under the number originally

assigned; thus — Rest.Lon.78-5yrs, or Cont.Liv.78-3yrs. Where the term in the case of continuation has expired, the Letter "C" only will be placed before the figure denoting the number of Years for which continuation had been allowed; thus — C 3.

The Port where a Vessel has been either Specially Surveyed, Continued, or Restored, is mentioned in the same column as the fact and date of such Special Surveys.

IN THE THIRTEENTH COLUMN.

The letter A indicates the character of the Vessel (Wood

or Composite).

The character A without a term of years, indicates that the Vessel, though not built under Survey or according to the Society's Rules, is considered worthy of the class assigned.

The broad A indicates the character assigned to a Vessel

built of Iron.

The character 100 indicates that the Yacht has been built in accordance with or equal to the Rules and Tables.

The character 90 is assigned to Yachts built in some respects deficient of the requirements for the 100 class.

The character \wedge without a numeral prefixed is assigned to Yachts already built to which the Rules do not apply.

A dagger (thus †) prefixed to the class of a Yacht indicates that she is also classed in the Register Book for Merchant Ships, and that the scantlings are equal to the requirements of the same.

The figures under a character denote the date when the Vessel was last Surveyed.

When the thirteenth column is left blank (except as regards the date of Survey last recorded), it indicates that the Character has expired or been withdrawn from absence of Survey, or on account of nonpayment of fee due in the case.

The figure 1 after the letter A or A indicates that the

equipment is in accordance with the Rules.

A line thus — after the letter A or A signifies that the equipment is not in accordance with the Rules.

The eleventh, twelfth, and thirteenth Columns left blank, indicate that the Vessel has never been Classed in the Register Book. Three dots ... in Column 12 indicate that the Vessel was at one time Classed by this Society, but that the Class has been withdrawn at owner's request. A black line with date under it in Column 13 indicates that, at that date, the Vessel, from reported defects, was not entitled to a Character in the Register Book. A red line with date under it in this Column indicates that the Class was withdrawn from non-compliance, at that date, with the Society's Rules.
